Your Year-Round Protection with EnergyGuard™!

Summer is heating up, it's the perfect time to remind you that Agway has you covered with year-round repair protection* on your heating and central air conditioning systems and electric lines! As part of our commitment to homeowners' assurance, we provide **EnergyGuard™** as a standard benefit to all our customers – and that means you!

EnergyGuard™

You can be confident knowing that Agway is here to protect your home. New York Department of Public Service Staff (“Staff”) filed a “White Paper” with the Public Service Commission (“PSC”) describing Staff’s investigation into home warranty products (HWPs), like Agway’s EnergyGuard™, that are being sold by ESCOs in the New York market.

Included in this document was the fact that individuals enrolled in a Home Warranty Program were able to claim a total of \$1,009,051 in benefits during the reporting period. The bulk of these claims originated from a specific Energy Service Company, with an average benefit redemption of \$709 per consumer over the specified timeframe. Guess who the specific Energy Service Company was? You guessed it! Agway.

** Coverage depends on the commodity purchased*

Never used the included protection of EnergyGuard™?

Watch our short video to learn what it is, how it works, and why it will save you money, by scanning the QR code or by visiting, agwayenergy.com/energyguard

Tips to Help You Through Summer

From Our Blog: Helpful information to keep your home running smoothly every season.

What is Air Conditioner Service?

Did you know air conditioners are one of the hardest working systems in your home and are subject to a high degree of wear and tear? Your cooling systems require regular maintenance to function effectively, otherwise it may lead to costly damages that home insurance won't cover.

Thankfully, our EnergyGuard™ program protects your furnace, central air conditioning, and internal wiring from depreciation caused by regular use.*

Beat the Heat: Energy Saving Tips

- Air leaks are one of the leading causes of energy loss. Check windows and doors for gaps and seal any drafts to reduce energy costs, and overworking your AC system.
- Check your central AC filter (quarterly) and replace it as needed.
- Have your AC system serviced annually to ensure optimal performance and identify issues early.
- Limit the use of appliances to early morning or late evening (after 9 p.m.) to reduce costs, and take advantage of off-peak pricing – when utility rates are lowest.
